SB International Celebrates 30 Year Anniversary

SB International was founded on March 19, 1981. Mr. Satish Gupta, President and CEO, founded the business to export non-ferrous metal products including scrap and off-spec steel. Within a few years, the company expanded into both importing and exporting stainless steel products and became a global trader of prime products in the domestic and international markets. The company seized the opportunity associated with the surge in demand for these products overseas and experienced tremendous initial growth.

In 2004, SB International became an importer and distributor of steel pipe and tubing products. In particular, the company focused on Oil Country Tubular Goods (OCTG) and Line Pipe, which are specialized steel pipe and tubing products that are used in down-hole applications and transportation of oil and natural gas. SB International established teams, both internationally and domestically, specifically focused on quality by ensuring all specifications are met through third-party inspection, through onsite manufacturer audits, and through additional property testing.

SB International's growth in the OCTG market has made it a leading supplier. The organization can credit much to its success, but nothing more important than a great vision combined a resilient and flexible approach to doing business.
